success story education

project description

This was an emergency mold remediation project for a school with students ranging from kindergarten to high school. The mold was caused due to a stuck damper in which warm outside air was entering the school during the summer months. Mold was found on the walls, ceiling, mechanical components, chairs, tables and most printed materials.

project challenges

BluSky was contacted on August 12th and assigned the job on August 13th. BluSky had 5 days to complete the mold and remediation testing so the school could open on August 19th.

success and results

BluSky successfully completed the mold remediation project on the expected date for the post-clearance test on August 18th. The following day, teachers were able to enter their classrooms on time to prepare for the start of a new year.
